

Enterprise Operations Platform Overview

WHAT IS IT

This is a multi-tenant, AI-assisted B2B business operations platform designed to serve industries requiring precision data management, automated calculations, professional document generation, and deep analytics.

The platform supports 25+ domain modules across agriculture, manufacturing, retail, logistics, finance, HR, and more.

KEY FEATURES

- Multi-tenant architecture with schema-per-tenant isolation
- 26 domain modules covering all major business functions
- Full double-entry accounting with VAT support
- Document management with versioning and e-signatures
- Real-time BI dashboards and custom reports
- Integrated AI modules for forecasting and anomaly detection
- Complete REST API with Swagger documentation

SUPPORTED INDUSTRIES

1. Agriculture - livestock tracking, crop management, grain reception
2. Manufacturing - BOM management, production orders, quality control
3. Retail - POS systems, multi-store management, inventory
4. Logistics - shipment tracking, delivery route optimization
5. Finance - invoicing, P&L statements, balance sheets
6. Technology - SaaS management, API integration hub

TECHNICAL STACK

```
